

### ABSTRACT

A computer enclosure comprises a control panel portion with a moveable dust-proof cover, a U-shaped top cover, a base having a slideway, and a computer chassis. The compute chassis can insert in or draw out of between the U-shaped top cover and the base. A bottom portion of the computer chassis has a slide thereon, corresponding to the slideway of the base. A supporting plate is mounted on a middle portion of the top cover for supporting the power supply. A front portion of the top cover has a securing plate for mounting a plurality of brackets thereon. The securing plate defines an upper opening and a low opening therein, corresponding to the brackets. A plurality of truckles is mounted on a bottom portion of the base for convenient movement of the base.
